

CASTER AND WHEEL SOLUTIONS

FOR FULFILLMENT APPLICATIONS

Automated Applications

Developing custom solutions for drive wheels, balancing casters, guide wheels, and idler wheels related to:

- Automated Guided Vehicles (AGV)
- Autonomous Mobile Robots (AMR)
- Automated Storage and Retrieval Systems (ASRS)
- Shelves and pick assists
- Automated tugs and towing units
- Collaborative robots

Manually Operated Applications

Providing the world's largest range of casters and wheels with various braking, fastening, and bearing options available for:

- Conveyors and sorters
- Monorails, cranes, and hoists
- Floor trucks and carts

Serving markets where efficiency, safety, and flexibility matter, including:

- eCommerce
- Food and beverage
- Pharmaceutical
- Third-party logistics
- Retail
- Grocery
- Parcel logistics
- ... and many, many more!

Engineered Solutions

Our engineering staff has over 100 years of accumulated caster experience and we continue to invest in engineering technologies, including:

- 3D parametric solid modeling (SolidWorks)
- Multi-axis tolerance analysis software
- 3D plastic printing
- Finite Element Analysis (FEA)
- Predictive mold flow analysis
- Downloadable 3D solid models and 2D drawings

LASTING PERFORMANCE

- Battery life improvement on powered solutions
- Minimized debris pickup and floor damage
- Rollability on multiple floor types and uneven surfaces

SAFETY

- Ergonomically designed
- Static-, shock-, and vibration-reducing options
- Reduced starting force

SELECTION

- Adherence to tight tolerances
- Widest range of caster solutions and wheel materials in the world
- From light to heavy duty applications

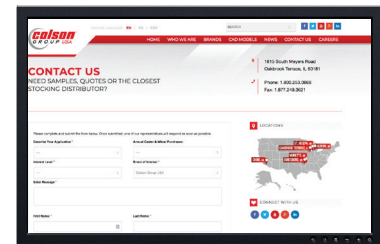

SUPPORT

- Experienced engineering team
- Online CAD downloads
- Global manufacturing, engineering, and sales teams
